

## Task 1

Write a use case (with alternatives and parameters) for order tracking: <https://viadelivery.ru/tracking>

-

Usage Scenario

Purpose: to get information about an order using its order number

S - system

U - user

### Scenario 1

1. U clicks on (activates) the field "Order number" and enters the number known to him in beforehand
2. S saves the entered data in the field
3. U enters the last 4 digits of the phone number in the "Last 4 digits of your phone" field
4. S saves the entered data in the field
5. U presses the "Check status" button
6. S displays the order status, expected delivery date, delivery address and current location of the parcel (if available).

### Scenario 2

1. U clicks on (activates) the "Order Number" field and enters a random (incorrect) order number
2. S saves the entered data in the field
3. U enters the last 4 digits of the phone number in the field "Last 4 digits of your phone number"
4. S saves the entered data in the field
5. U presses the "Check status" button
6. S displays the following message: "Orders are not found! Please check the entered data".

### Scenario 3

1. U
2. S saves the entered data in the field
3. U enters the last 4 digits of the (non-existent) phone number in the "Last 4 digits of your phone" field
4. S saves the entered data in the field
5. U presses the "Check status" button
6. S displays the following message: "Orders are not found! Please check the entered data".

### Scenario 4

1. U clicks on (activates) the "Order number" field and enters incorrect data format - letters, wildcards, spaces
2. S saves the entered data in the field
3. U enters the last 4 digits of the phone number in the "Last 4 digits of your phone" field
4. S saves the entered data in the field
5. U presses the "Check status" button
6. S displays the following message: "Orders are not found! Please check the entered data".

### Scenario 5

1. U clicks on (activates) the field "Order number" and enters the number known to him in beforehand
2. S saves the entered data in the field
3. U enters less than 4 digits in the "Last 4 digits of your phone" field.
4. S saves the entered data in the field
5. U presses the "Check status" button
6. S displays the following message: "Orders are not found! Please check the entered data".

**Scenario 6 (order and phone number aren't connected  
with each other)**

1. U clicks on (activates) the field "Order number" and enters the number known to him in beforehand
2. S saves the entered data in the field
3. U enters 4 digits in the "Last 4 digits of your phone" field.
4. S saves the entered data in the field
5. U presses the "Check status" button
6. S displays the following message: "Orders are not found! Please check the entered data".
