Make a common table of parameters and values. Create tables of tests and estimate the amount of tests obtained for the following techniques

- Brut-Force method (table for any three parameters, calculate the amount of tests for these three parameters and for all parameters)
- Method of Minimum checks (for all parameters)
- Atomicity tests (for all parameters)

### Task 2 (check [brut-force.xlsx](#), list: "Task 2")

When registering on the website, you can enter up to 150 characters, and in the optional field "Phone" - 8 characters.

- Apply the domain analysis technique and build a table with the input data for testing.
